IMAGINE IT. BUILD IT.

An idea is all it takes.

Turn your idea into a web application with AI.

TUESDAY, 3 NOVEMBER 2026

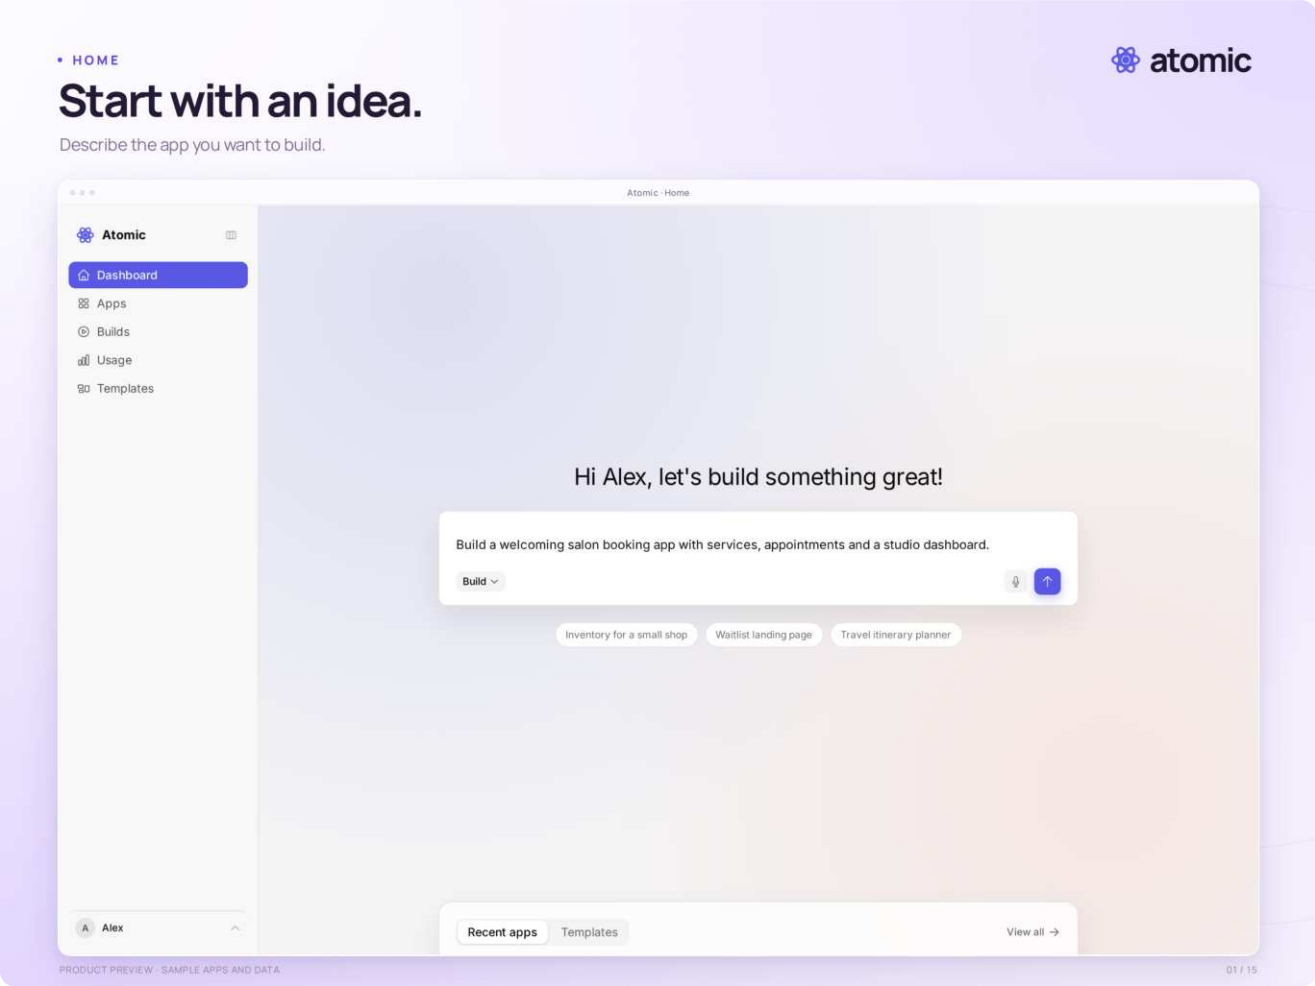

The Atomic home screen · start with a prompt

Product information, editorial copy and media assets
Media contact: Drasko Draskovic · drasko@absmach.eu

PRODUCT OVERVIEW

Your idea. A working app.

Atomic is an AI app builder from Abstract Machines that turns plain-language ideas into web applications, with visual editing, previews, source access and publishing.

Start with a description · draft prompt in a local demo workspace

An idea is all it takes

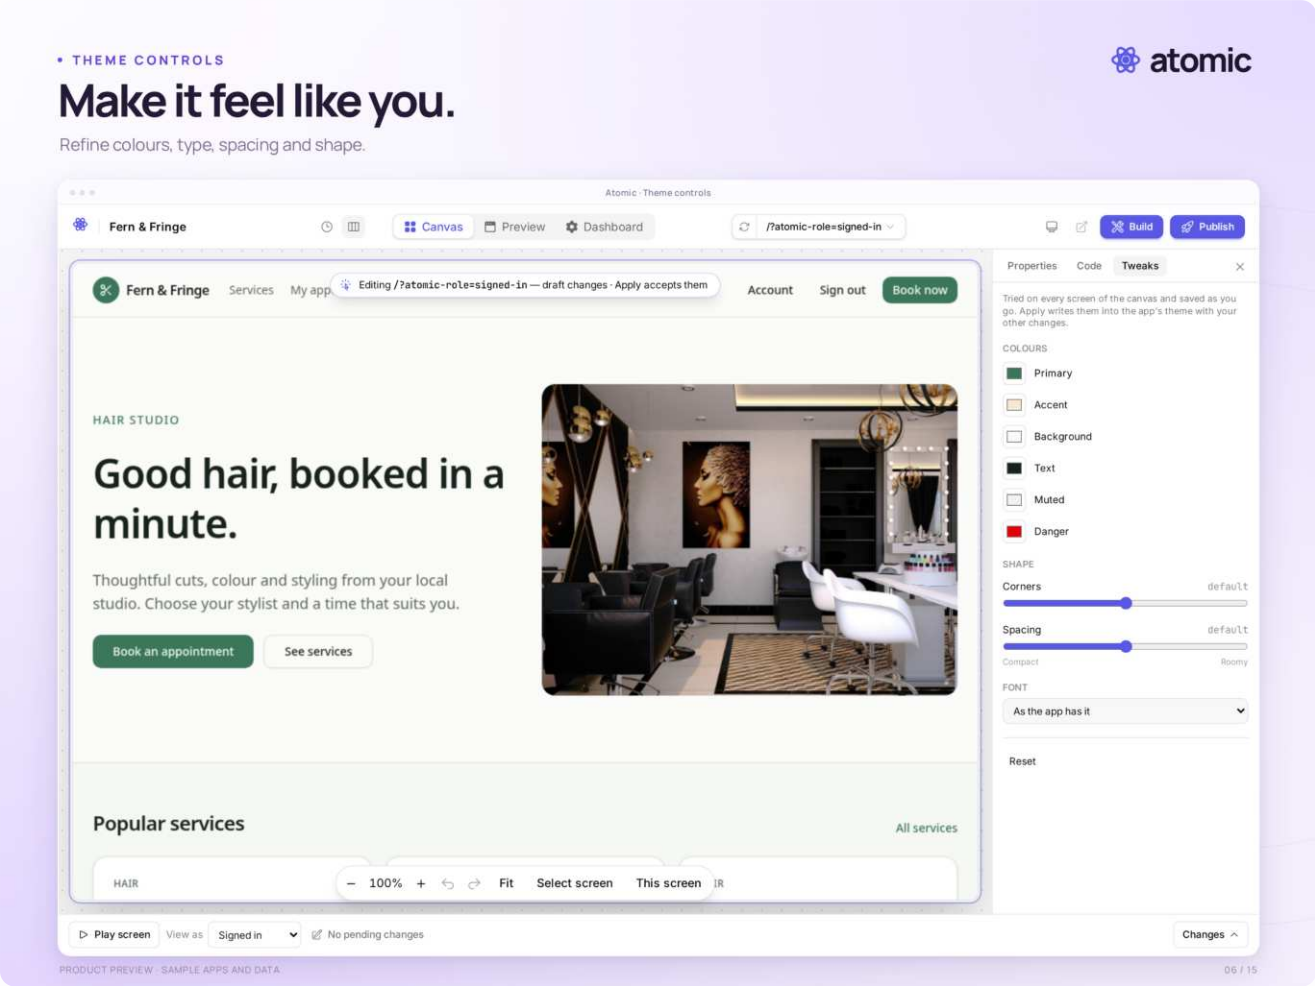

Describe your app or choose a template. Review the result, shape the details and publish a version you have checked.

Built for your next project

For founders, freelancers and small businesses creating booking apps, shops, client portals and internal tools.

PRODUCT OVERVIEW

Your idea. A working app.

Shape the app on the Canvas · sample salon application

From the first draft to the details

- Refine the app through conversation and visual editing.
- Navigate its screens, adjust selected elements and tune the whole-app theme.
- Leave feedback in context; work with teammates.
- Inspect source, revisit versions and publish a reviewed release.

Atom provides identities, permissions and application data. Source downloads include code, not app users, business data or hosting infrastructure.

COMPANY OVERVIEW

The team behind Atomic.

Abstract Machines is a Paris-based applied AI company building intelligent software and the infrastructure behind it. Its work combines application development, open-source engineering and research across connected systems, identity and confidential computing. Atomic is its AI app builder; Atom is the open-source backend providing identity, permissions and application data.

Company	Abstract Machines
Location	Paris, France
Founded	2023
Founder	Drasko Draskovic
Focus	Applied AI, open-source software and systems engineering

From infrastructure to applications

Abstract Machines' engineering background includes connected systems, identity and access management, and cloud and edge software. Atomic brings that experience to people who want to build useful applications from a description of their business needs.

Three names, different roles

Atomic	The AI app builder: conversation, visual editing, previews, source and publication.
Atom	The open-source backend for identities, permissions and application data.
Abstract Machines	The company developing Atomic and Atom, alongside its wider software and research portfolio.

Engineering and research

The company develops open-source infrastructure including Magistrala, its IoT platform, and contributes to European research in orchestration, confidential computing and security. Atomic is a product of Abstract Machines, not the name of a separate company in this kit.

LAUNCH ANNOUNCEMENT

Atomic launches on 3 November.

AI-assisted application creation, visual editing and an open-source backend foundation for founders, freelancers and small businesses.

PARIS — 29 October 2026. Abstract Machines today announces Atomic, an AI app builder launching on Tuesday, 3 November 2026. Atomic helps people describe an application, shape it through conversation and visual editing, and publish a version they have reviewed.

A business may need a place for customers to book appointments, browse products or access a client workspace. Atomic brings the steps from that initial idea to a working web application into one interface. Users can begin with a prompt or a template, inspect the result and continue refining it.

The Canvas provides a view of an app's screens and states, with controls for selected elements and whole-app styling. Comments can be attached to elements so feedback stays connected to the part of the app being discussed. Shared workspaces and app access controls support collaboration.

Atomic also exposes the generated source and its version history. Automated build and browser checks support review before publication; users remain responsible for checking that the app meets their intended workflows. The underlying Atom backend, developed by the same team, provides application identities, permissions and business data.

> "We built Atomic for people who know what their business needs but don't want to start with a blank code editor. Describe the app, shape it with AI, and make it something your customers can use."
>
> Drasko Draskovic, Founder & CEO

Availability

Atomic launches Tuesday, 3 November 2026. Journalists can contact Drasko Draskovic for product walkthroughs, interviews and launch-access information.

Launch plans: Free ($0), Builder at $25/month, and Pro at $50/month.

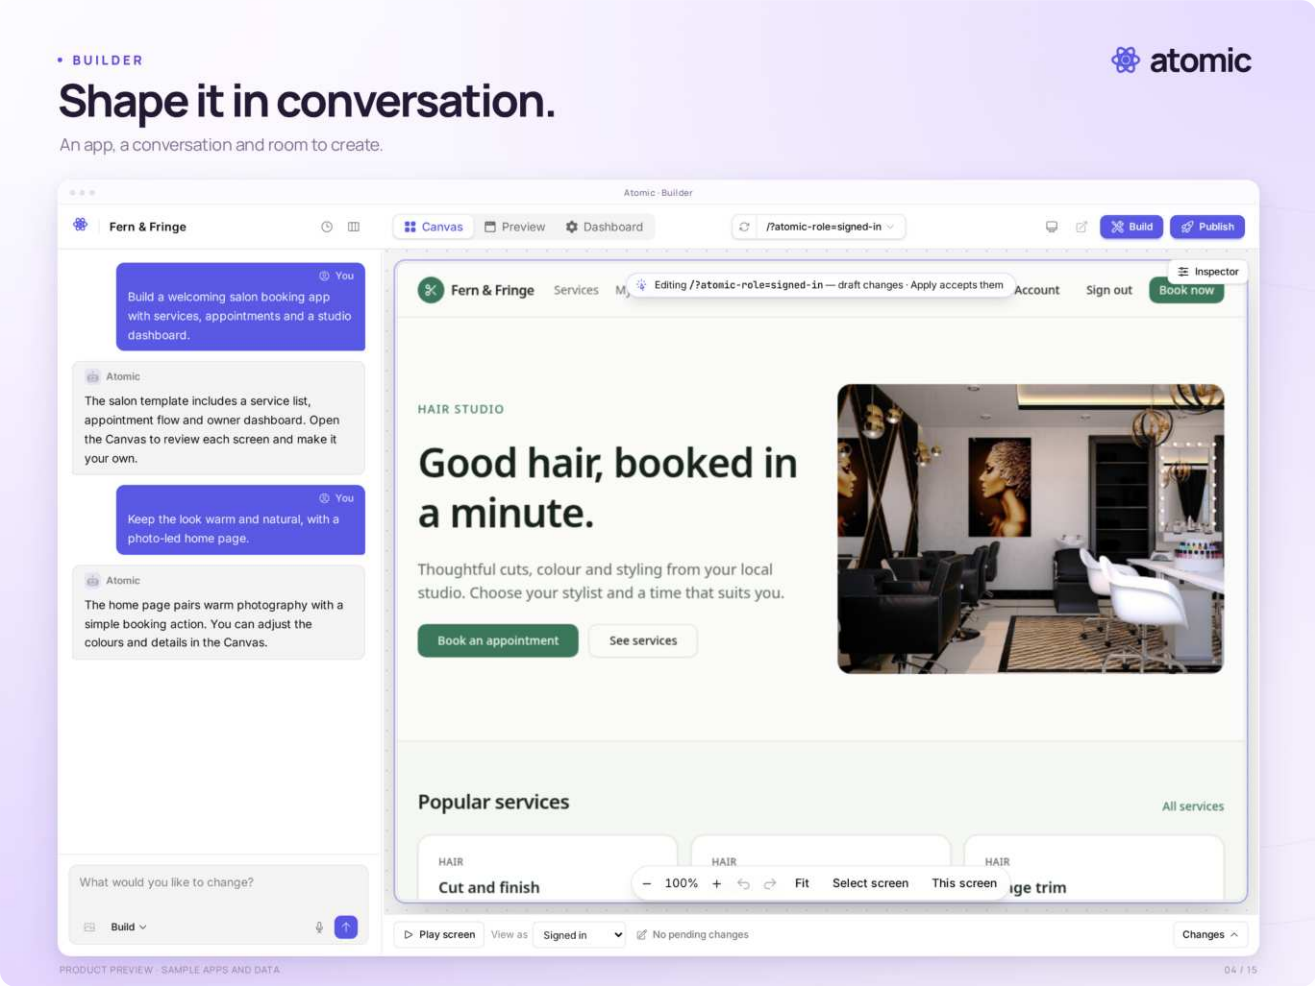

About Abstract Machines

Abstract Machines is a Paris-based applied AI company building intelligent software and the infrastructure behind it. Its work combines application development, open-source engineering and research across connected systems, identity and confidential computing. Atomic is its AI app builder; Atom is the open-source backend providing identity, permissions and application data.

FACTS & REUSABLE COPY

Atomic, at a glance.

One sentence

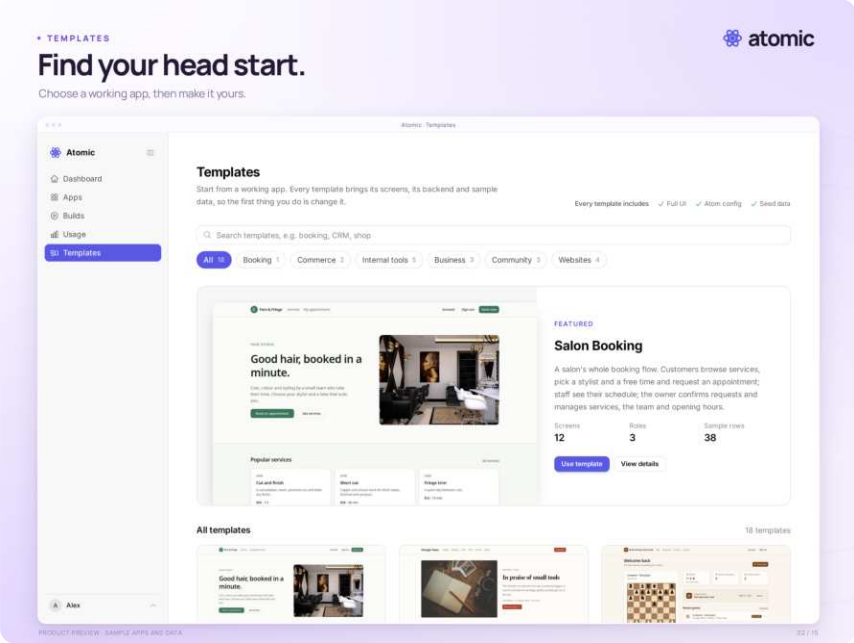

Atomic is an AI app builder from Abstract Machines that turns plain-language ideas into web applications, with visual editing, previews, source access and publishing.

Short description

Atomic helps founders, freelancers and small businesses turn an idea into a web application. Start with a prompt or template, refine the result in conversation and on the Canvas, inspect the source, and publish a reviewed version. Atom, the open-source backend from the same team, provides application identities, permissions and data.

Company boilerplate

Abstract Machines is a Paris-based applied AI company building intelligent software and the infrastructure behind it. Its work combines application development, open-source engineering and research across connected systems, identity and confidential computing. Atomic is its AI app builder; Atom is the open-source backend providing identity, permissions and application data.

Start from a working template · photo-based sample apps

Names and language

Write “Atomic” for the product and “Abstract Machines” for the company. “Atom” is the backend. Screenshots show sample applications and data; they are not customer claims.

PEOPLE

Meet the people behind Atomic.

Drasko Draskovic · Founder & CEO

Drasko Draskovic

Founder & CEO · Paris, France

Drasko Draskovic is the founder of Abstract Machines and the founder and CEO behind Atomic. A deep-tech entrepreneur and systems engineer, he brings more than 20 years of experience in IoT and cloud-computing systems. His background includes work at Texas Instruments, Alcatel-Lucent, Nokia, Sequans and Devialet. He co-founded Datapace with George Saleh as an internal venture at Nokia, where he served as CTO. His work spans open-source infrastructure and the identity, data and execution systems that support applications.

Short bio

Drasko Draskovic is the founder of Abstract Machines and the founder and CEO behind Atomic. He is a systems engineer and entrepreneur with more than 20 years of experience in IoT and cloud computing.

Interview topics

- Taking an app from an idea to a reviewed release.
- Why application identity, permissions and data matter in AI app building.
- Source visibility and open-source infrastructure.

PEOPLE

Meet the people behind Atomic.

Dusan Borovcanin

Technical leadership

Dusan Borovcanin is Tech Lead at Abstract Machines, with more than 10 years of experience in distributed systems. His work includes confidential-computing infrastructure for AI and the engineering foundations behind Atomic. He previously built cocos-ai alongside Drasko Draskovic at Ultraviolet.

George Saleh

Finance & Operations

George Saleh leads finance and operations for Atomic. He brings more than 27 years of technology-leadership experience spanning AI, blockchain, enterprise architecture and digital transformation. He co-founded Datapace with Drasko Draskovic as an internal venture at Nokia. His background includes Distinguished Member of Technical Staff standing at Nokia.

Portraits included

Drasko Draskovic	4096 × 3072 JPEG · original supplied photograph
Dusan Borovcanin	288 × 288 PNG · supplied profile portrait
George Saleh	460 × 460 JPEG · supplied profile portrait

Portraits are supplied at their original resolution. Dusan's and George's files are suitable for small digital placements; ask the press contact for larger publication requirements. Suggested credit: Courtesy of Abstract Machines. Photographer names were not supplied.

PRESS FAQ

Questions worth answering.

What is Atomic?

Atomic helps founders, freelancers and small businesses turn an idea into a web application. Start with a prompt or template, refine the result in conversation and on the Canvas, inspect the source, and publish a reviewed version. Atom, the open-source backend from the same team, provides application identities, permissions and data.

Do I need to know how to code?

You can start by describing what you want to build. Atomic provides a preview and tools for refining it through conversation and visual editing. You should still review and test the workflows before sharing the application.

What can I build?

Typical starting points include booking apps, online shops, client portals and internal tools. Templates provide examples that can be previewed and adapted. The commerce starter workflow records order requests; it does not by itself collect payments.

What does the Canvas do?

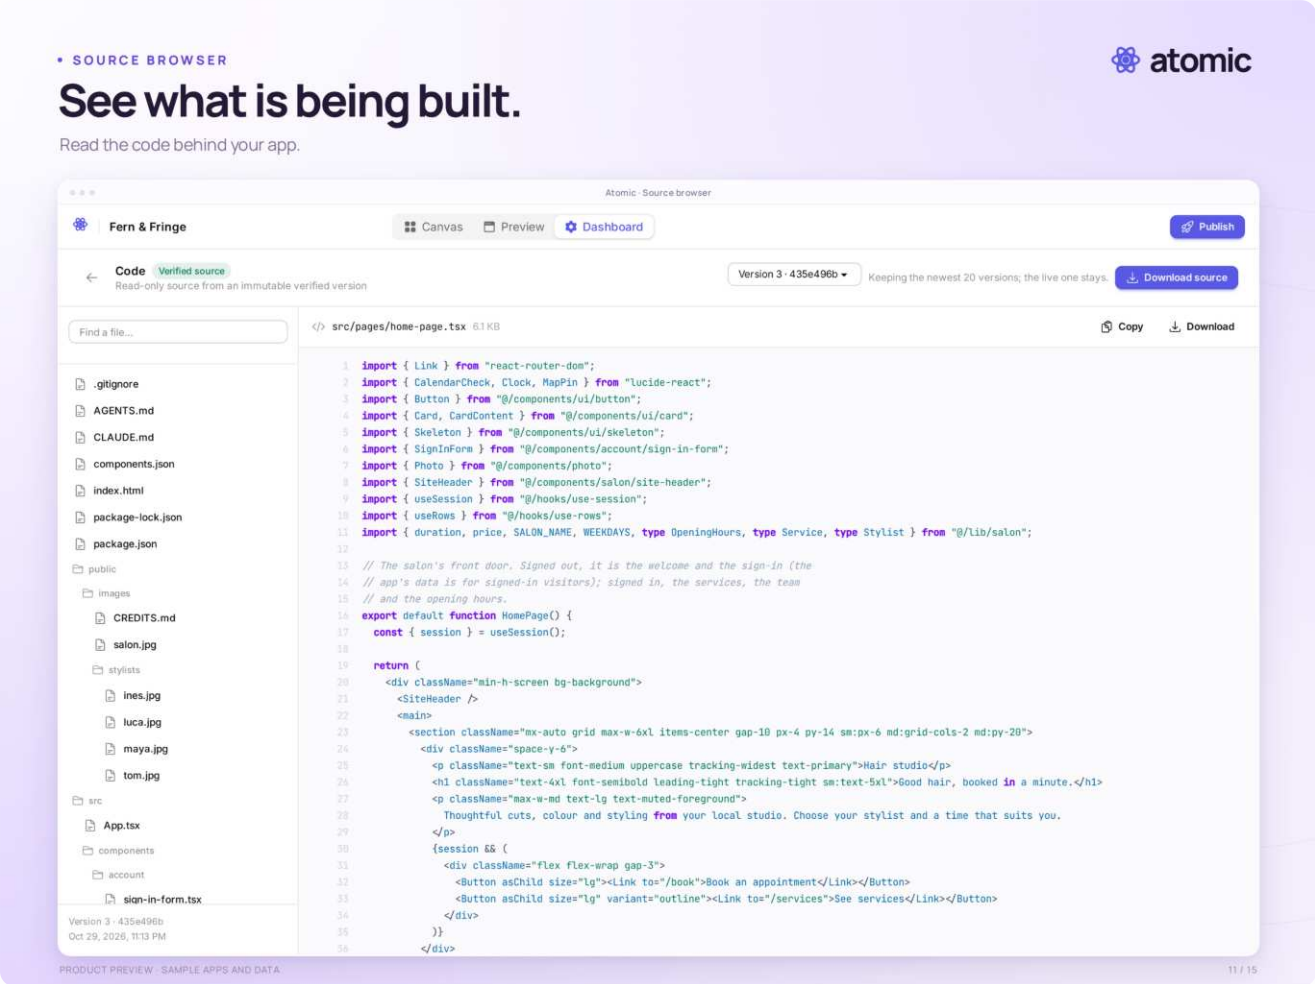

The Canvas lets builders navigate screens and states, select elements, adjust styling and leave contextual comments. Whole-app theme controls include colours, shape, spacing and fonts.

Can I work with other people?

Atomic supports shared workspaces and app collaborators. Workspace builders and the people who use a finished app have separate accounts and access flows.

PRESS FAQ

Questions worth answering.

Inspect the generated source · local sample application

Can I inspect and download the code?

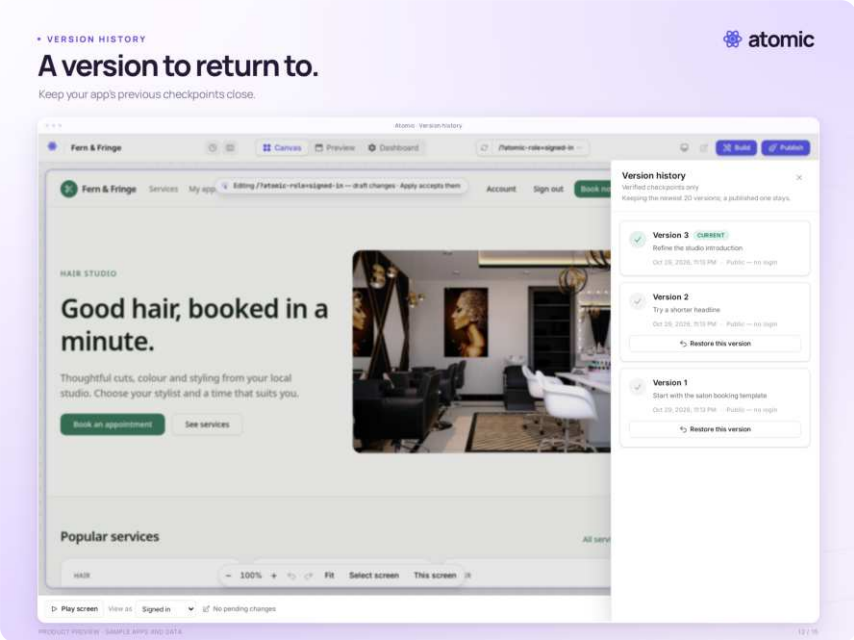

Yes. Atomic exposes the generated source and supports source downloads and verified version history. A source archive does not include app users, business data or hosting infrastructure, and is not a complete portable deployment package.

What does “Verified” mean?

It identifies a version that passed Atomic’s configured automated checks, including build and browser smoke checks. It is not a guarantee that every business workflow is correct or that an application has passed an independent security audit.

PRESS FAQ

Questions worth answering.

Review earlier checkpoints · compiled local demonstration revisions

Can I restore an earlier version?

Atomic provides source history and publication history. Restoring source and rolling back an application release concern code; they do not restore business data. Publication rollback also depends on compatibility with applied data migrations.

Is Atomic open source?

Atom, the backend used for application identities, permissions and data, is open source. This should not be read as a claim that the Atomic builder itself is open source.

When does it launch, and what will it cost?

Atomic launches Tuesday, 3 November 2026. Launch plans: Free ($0), Builder at $25/month, and Pro at $50/month.

How do I arrange an interview or demo?

Contact Drasko Draskovic at drasko@absmach.eu. General enquiries can also go to info@absmach.eu.

BRAND GUIDE

Present Atomic clearly.

Use the full logo where space allows. Use the standalone symbol for compact placements such as avatars and icon grids.

Colour and type

Logo violet	Campaign accent	Ink	Soft background
#5959E6	#5C32F7	#1F152C	#F4EAFF

Manrope is the campaign typeface. The supplied wordmark is outlined vector artwork, so recipients do not need to install the font. The logo's canonical violet is preserved; the brighter purple is the campaign accent. The font licence is included in the assets folder.

Space and legibility

Leave clear space of at least half the symbol's height around the full logo. As a practical starting point, use the full lockup at 120 pixels wide or larger, and the symbol at 24 pixels or larger. Check legibility at the final display size.

Usage

Keep proportions and colours intact. Use the white version on a dark background and the colour or black version on a light one. Avoid stretching, outlining, adding effects or placing the mark over busy imagery. Write the product name as "Atomic" in text.

BRAND GUIDE

Present Atomic clearly.

Which file should I use?

SVG	Best for web, digital publishing and design work. Scales cleanly; all wordmark lettering is outlined.
Transparent PNG	For slides, social graphics and tools that need a bitmap. Supplied at 512 and 2048 pixels wide.
Vector PDF	For print and page-layout software. RGB artwork; a printer can handle any required colour conversion.

What is in the logo folder?

- Lockup: symbol and wordmark together.
- Wordmark: the lettering alone.
- Symbol: the atom graphic alone.
- Each is supplied in colour, black and white.

Editorial credits

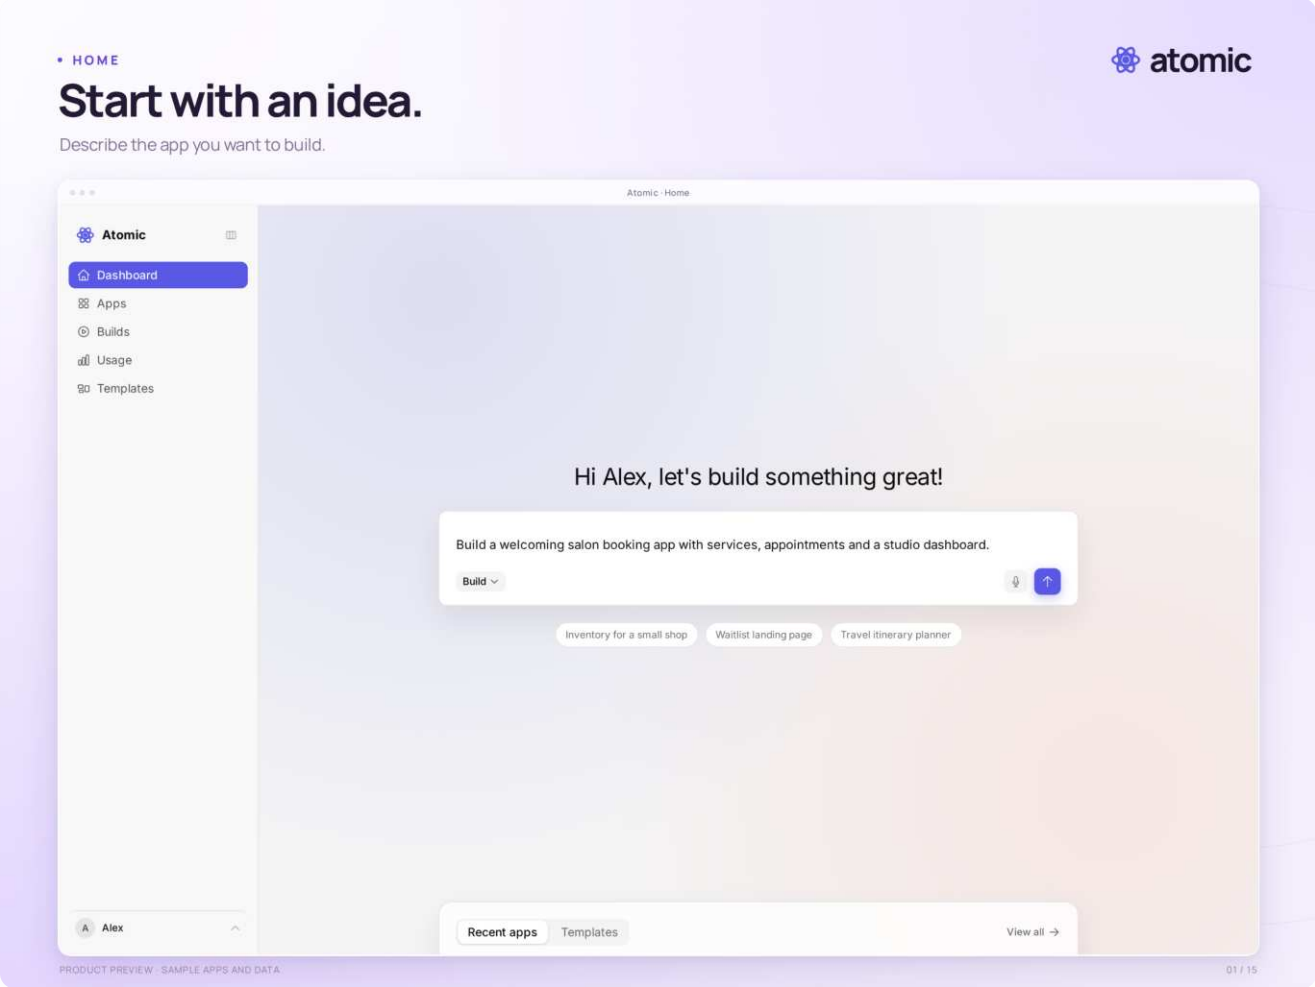

Suggested credit for product screenshots and campaign artwork: “Courtesy of Atomic / Abstract Machines.” Suggested credit for team portraits: “Courtesy of Abstract Machines.” The kit does not identify individual photographers.

Sample-app photographs appear within product screenshots. Those screenshots are supplied to illustrate Atomic; the embedded photographs are not supplied as separate stock assets. Preserve context and avoid implying the sample businesses are customers.

VIDEO & SOCIAL ASSETS

Choose the right asset.

10-second square teaser	05-video/atomic-teaser-square.mp4 1080 × 1080 · 30 fps · H.264/AAC
10-second vertical teaser	05-video/atomic-teaser-vertical.mp4 1080 × 1920 · 30 fps · H.264/AAC
35-second product demo	05-video/atomic-product-demo.mp4 1920 × 1080 · 30 fps · H.264/AAC

Teaser

Imagine it. Build it. Coming soon. The teaser ends with Tuesday, 3 November, and works without narration. Square and vertical versions use the same approved ElevenLabs music and timing.

Product demo

The longer demo covers describing an idea, choosing a template, editing on the Canvas, contextual comments, source access and publication. Its browser sequences show a local sample app. The evergreen launch film shows atomicapp.dev in the opening, Canvas and closing scenes, with no launch date. Narration and music use the approved ElevenLabs audio.

Cover images

The 06-social folder contains square and vertical launch covers matching the teasers. The vertical layout leaves space around the main message for viewing controls.

Captions and context

The longer demo includes an SRT subtitle file and a plain-text transcript. The teasers carry their message on screen. Sample apps and businesses demonstrate workflows; they are not customer endorsements.

Availability

The short teasers announce the 3 November 2026 launch; the longer film can also be used after launch. Visit atomicapp.dev for product information. For interviews, walkthroughs or access details, use the press contact.
