IMAGINE IT. BUILD IT.

An idea is all it takes.

Turn your idea into a web application with AI.

PRODUCT · COMPANY · MEDIA

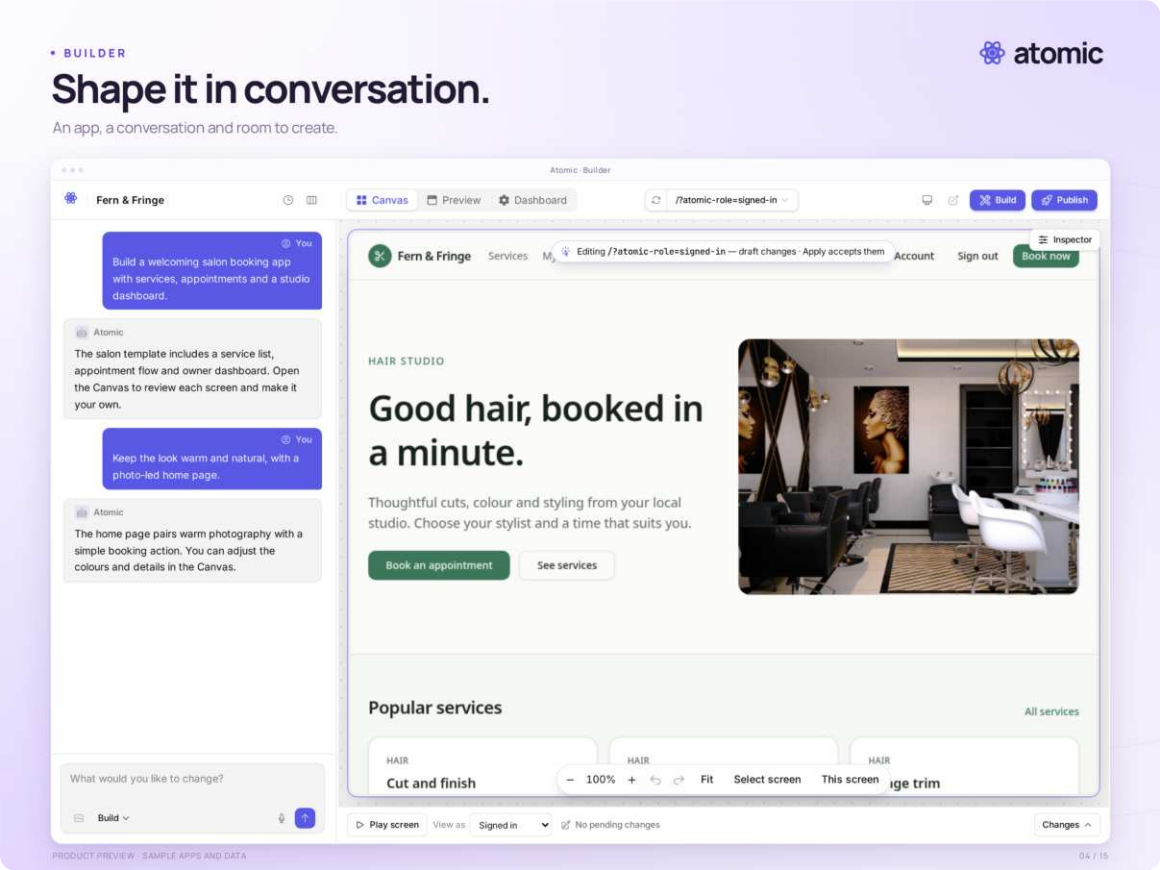

A sample salon app built with Atomic · from the first idea to a working experience

Product information, editorial copy and media assets
Media contact: Drasko Draskovic · drasko@absmach.eu

PRODUCT OVERVIEW

Build in conversation.

Atomic is an AI app builder from Abstract Machines that turns plain-language ideas into web applications, with visual editing, previews, source access and publishing.

Builder · a working preview beside a staged sample conversation

The builder is the centre of the workflow

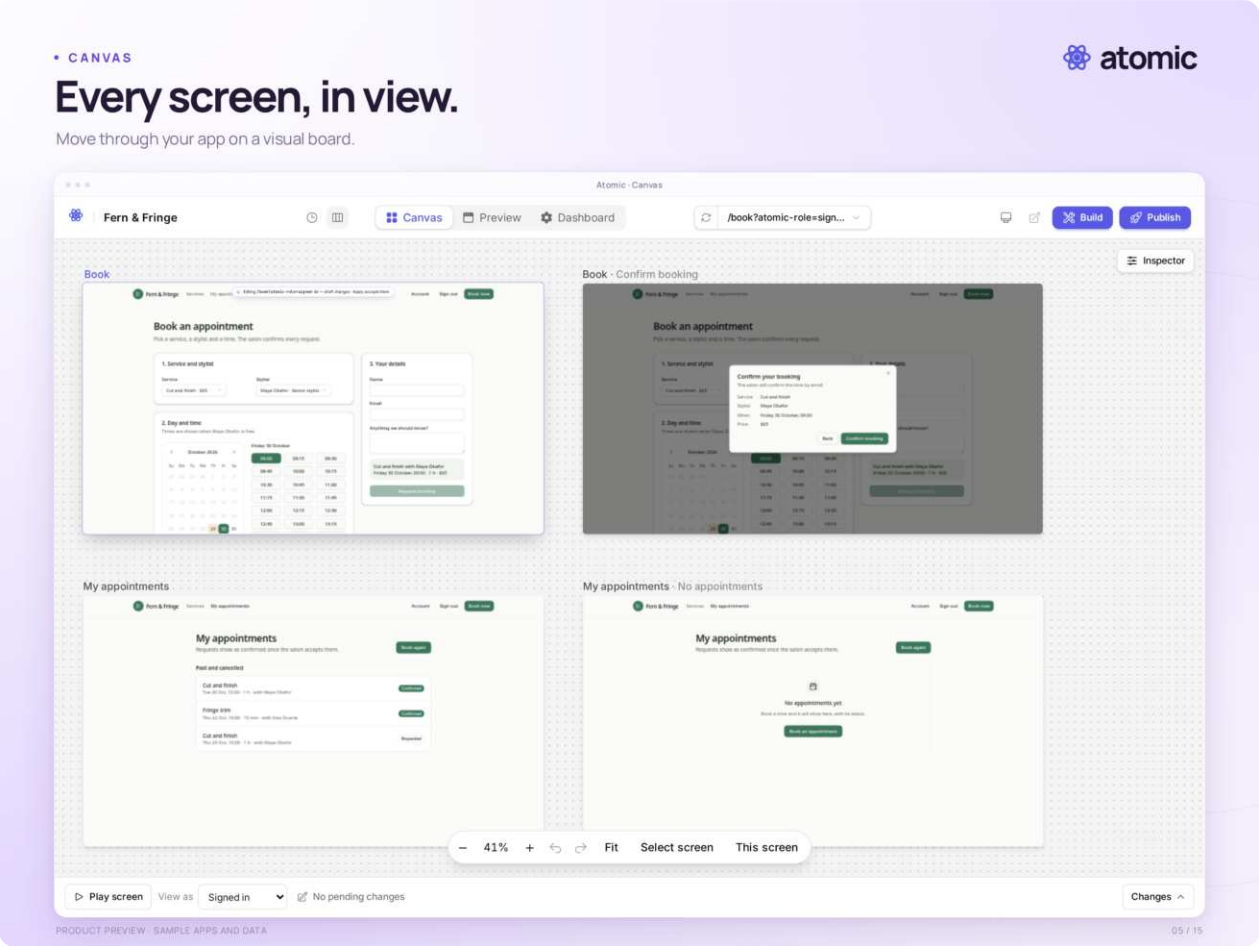

Describe what the app should do, review the working preview and refine it through conversation. Start from an idea or a template, then keep the brief and the result together as you build.

The example is a salon booking app with services, appointments and a studio workflow.

atomicapp.dev · Press room and complete media kit

PRODUCT OVERVIEW

Explore the whole Canvas.

Canvas · booking screens, a confirmation dialog and appointment views

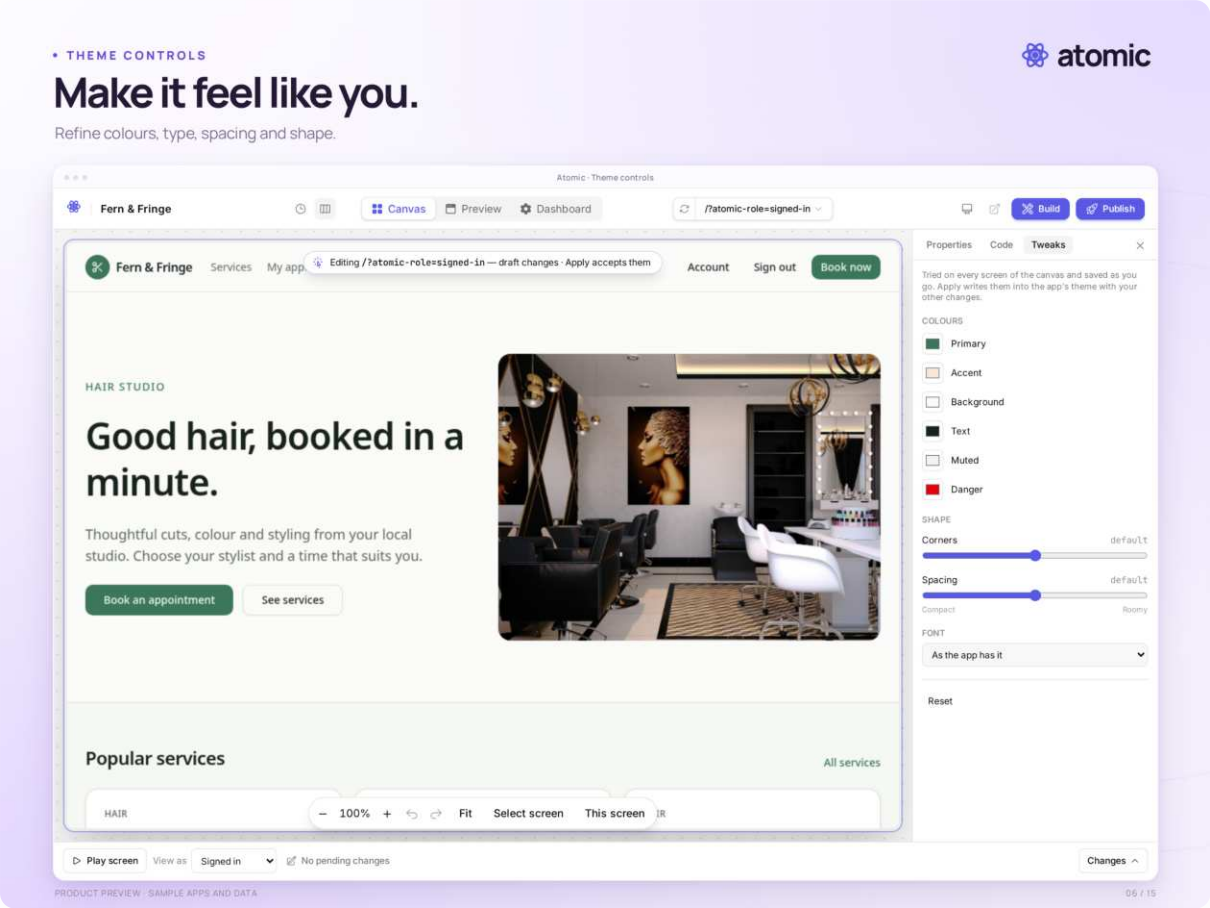

See how the screens fit together

Navigate the visual board, zoom into a screen and review the states that make up a complete flow. A booking journey includes more than its landing page: choices, confirmation and the next appointment all need attention.

Preview the app at different sizes and test the paths your users will take.

PRODUCT OVERVIEW

Make it your own.

Theme controls · colours, typography, spacing and shape

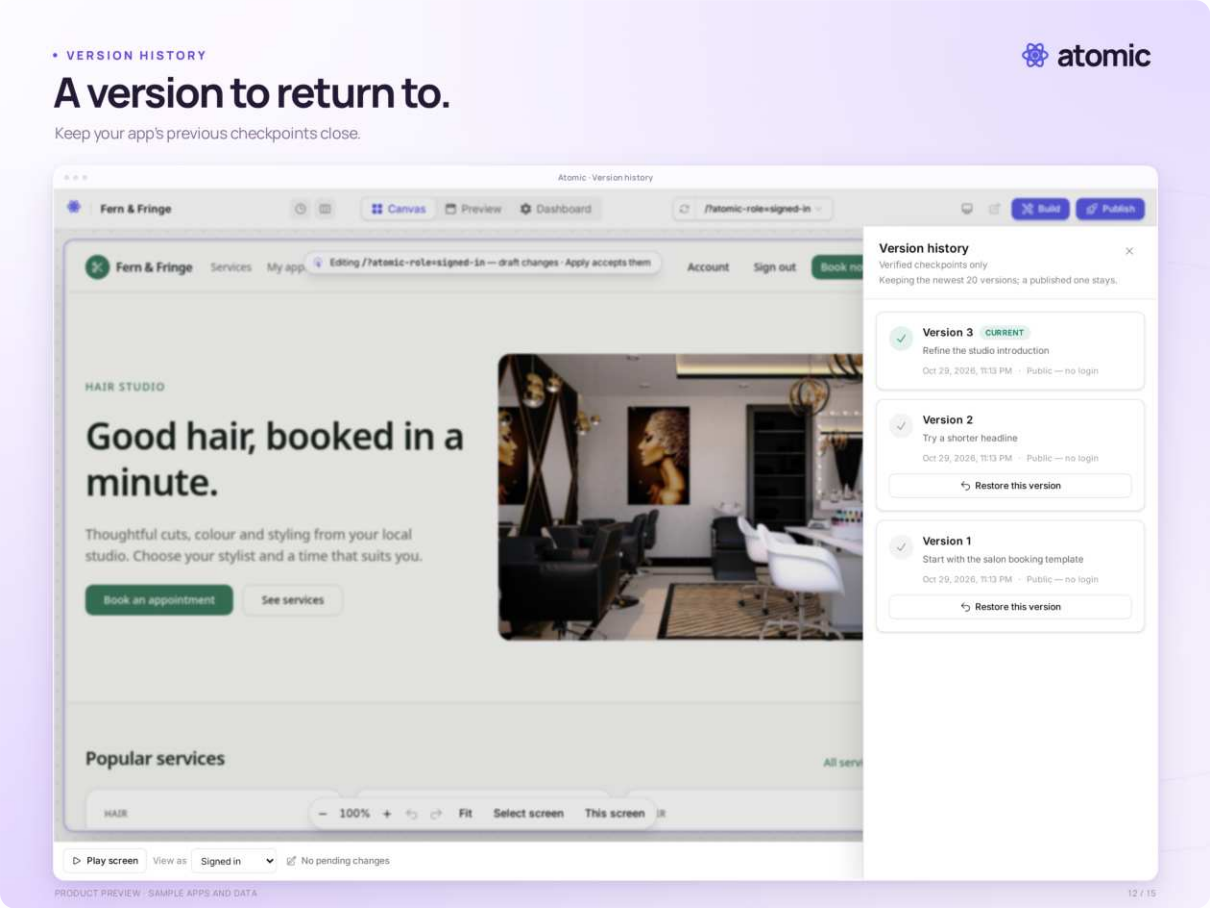

Shape the whole app, then refine the details

Tune the overall style on the Canvas. Select an individual element to inspect its properties, and attach feedback to the part you mean. Builder and Pro support collaboration with teammates.

The gallery also includes element editing and an element-linked comment draft.

PRODUCT OVERVIEW

Keep track of every version.

Version history · prepared sample revisions for a local demo app

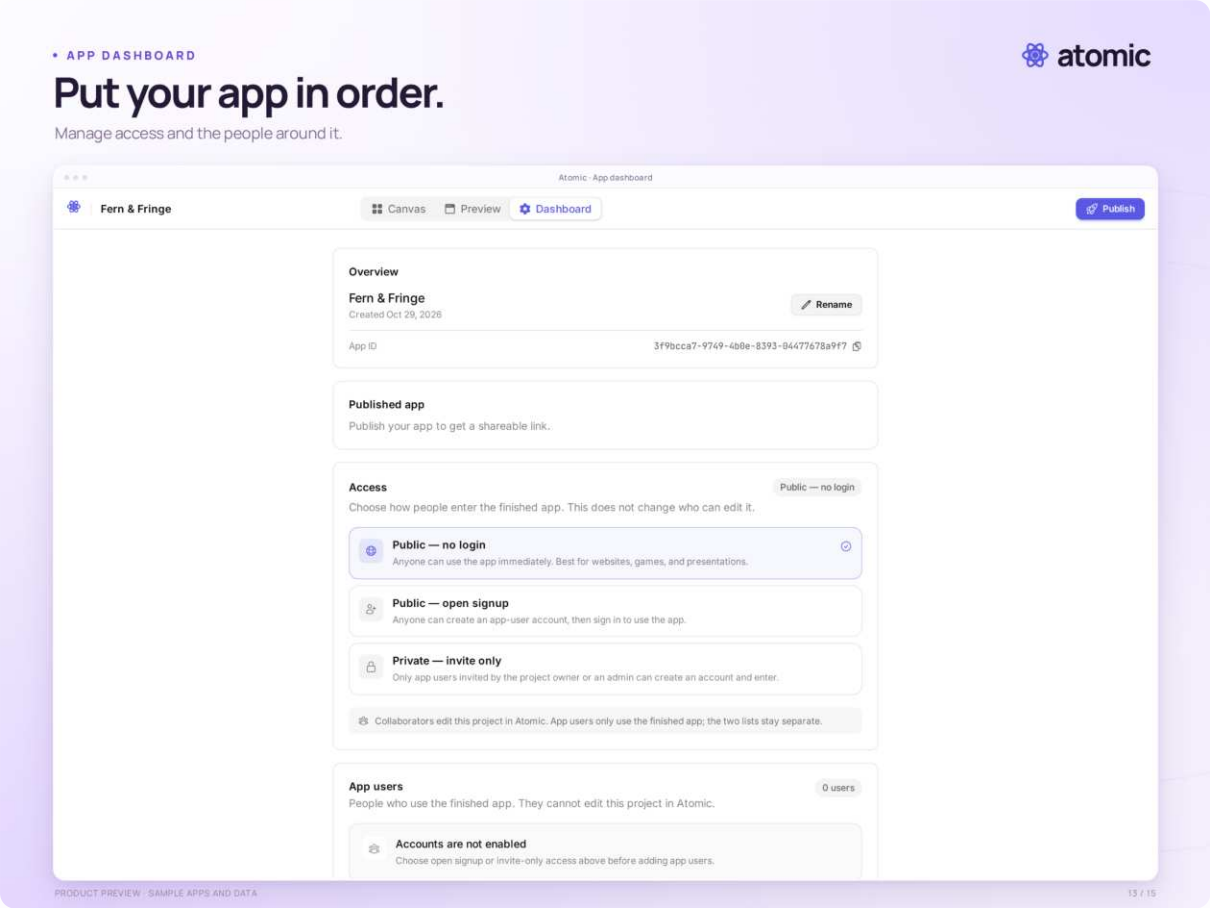

Review the work behind each change

Inspect the source and move through version history before choosing what to release. Source browsing is available on all plans; Builder and Pro also include source downloads.

Restoring source or rolling back a publication concerns code, not business data. Publication rollback depends on compatibility with applied data migrations. Downloads exclude users, business data and hosting infrastructure.

PRODUCT OVERVIEW

Review. Publish. Manage.

Publishing and app dashboard · publication, access and app-user settings

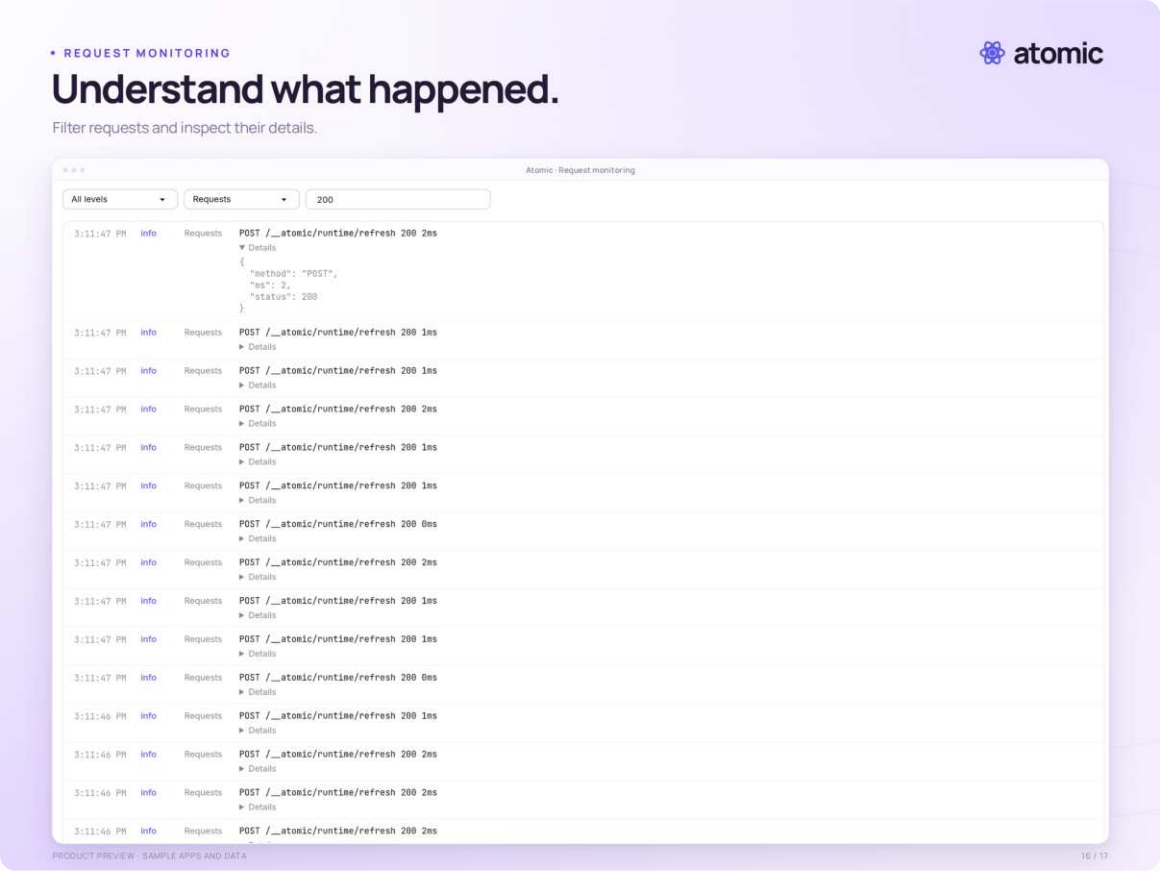

Choose who can use the finished app

Review the version, choose the access model and publish. The dashboard brings publication and app-user settings together, including public access, open signup and invitation-only entry.

Workspace collaborators edit the project; app users use the finished app. These are separate roles. This local sample has not been publicly deployed.

PRODUCT OVERVIEW

See what is happening.

Request monitoring · a filtered log and expanded request details

Inspect activity in the preview

Searchable preview logs on Builder and Pro let you filter requests and inspect individual entries when investigating app behaviour. The usage view provides another perspective: recent building sessions, credits used and time spent.

Shown traffic and usage are local demonstration data. Atom provides the underlying identities, permissions and application data.

Watch the 35-second launch film · Square and vertical versions are available in the press room.

COMPANY OVERVIEW

The team behind Atomic.

Abstract Machines is a Paris-based applied AI company building intelligent software and the infrastructure behind it. Its work combines application development, open-source engineering and research across connected systems, identity and confidential computing. Atomic is its AI app builder; Atom is the open-source backend providing identity, permissions and application data.

Company	Abstract Machines · founded in 2023
Location	Paris, France
Founder	Drasko Draskovic
Product website	atomicapp.dev

Engineering behind the product

The team's background spans connected systems, identity, cloud and edge software. Its open-source work includes Magistrala, an IoT platform, alongside European research in orchestration, confidential computing and security.

Atomic, Atom and Abstract Machines

Atomic is the AI app builder. Atom is the open-source backend for identities, permissions and data. Abstract Machines is the company developing both, alongside its wider engineering and research work.

Company and product media

The press room includes founder and team portraits, 17 product views, three formats of the 35-second launch film and matching opening-design covers. The builder, Canvas, publishing and monitoring views illustrate the product story; the supplied portraits support company coverage.

PRODUCT ANNOUNCEMENT

Turn ideas into applications.

Abstract Machines announces an AI app builder for founders, freelancers and small businesses.

Feedback on the Canvas · an element-linked comment draft

Abstract Machines introduces Atomic, an AI app builder for people who know what they want to create. Atomic helps turn plain-language ideas into web applications, refine them through conversation and visual editing, and publish a version they have reviewed.

Users can begin with a prompt or a template. The Canvas brings screens and styling controls together, while contextual comments keep feedback attached to the part of an app being discussed.

Product information: atomicapp.dev · Press room and complete media kit

PRODUCT ANNOUNCEMENT

Turn ideas into applications.

From an idea to a reviewed release

Atomic combines a working preview, a visual Canvas, source access and version history. Users can adjust whole-app styling, refine individual elements and work with teammates. Generated applications use Atom, the open-source backend from the same team, for identities, permissions and business data.

> "We built Atomic for people who know what their business needs but don't want to start with a blank code editor. Describe the app, shape it with AI, and make it something your customers can use."
>
> Drasko Draskovic, Founder & CEO

Product information

Free ($0), Builder at $25/month, and Pro at $50/month. Visit atomicapp.dev for product information and access details.

Media accompanying this announcement

The current gallery follows the product from its home screen and templates through the builder, Canvas, theme controls, collaboration, source, versions and publishing. Applications, billing, request monitoring and usage show how the work is managed. A 35-second launch film is supplied in widescreen, square and vertical formats, with matching "Big idea? Make it real." covers.

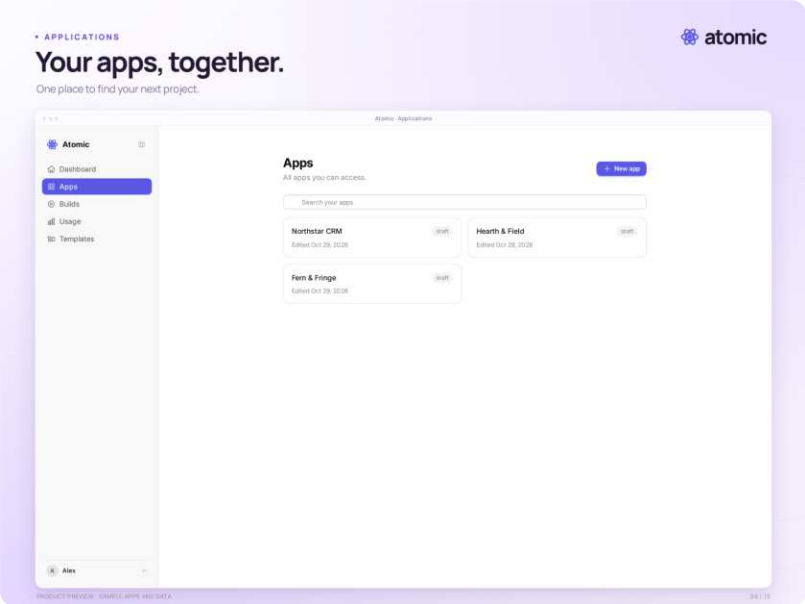

About Abstract Machines

FACTS & REUSABLE COPY

Atomic, at a glance.

Applications · a workspace containing three sample projects

Product	Atomic · AI web-application builder
Company	Abstract Machines · Paris, France
Website	atomicapp.dev
Launch date	3 November 2026
Plans	Free ($0), Builder at $25/month, and Pro at $50/month.
Free allowance	250 credits once, used at up to 50 a day
Paid-plan features	Source downloads, searchable preview logs and collaboration: Builder / Pro
For	Founders, freelancers and small businesses
Examples	Bookings, shops, client portals and internal tools
Media	17 product views · 3 launch-film formats · 3 matching covers
Press contact	Drasko Draskovic · drasko@absmach.eu

FACTS & REUSABLE COPY

Atomic, at a glance.

One sentence

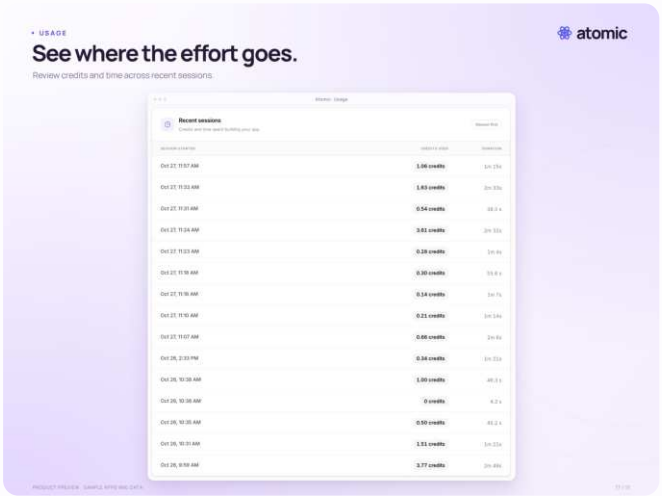

Atomic is an AI app builder from Abstract Machines that turns plain-language ideas into web applications, with visual editing, previews, source access and publishing.

Short description

Atomic helps founders, freelancers and small businesses turn an idea into a web application. Start with a prompt or template, refine the result in conversation and on the Canvas, inspect the source, and publish a reviewed version. Atom, the open-source backend from the same team, provides application identities, permissions and data.

Company boilerplate

Abstract Machines is a Paris-based applied AI company building intelligent software and the infrastructure behind it. Its work combines application development, open-source engineering and research across connected systems, identity and confidential computing. Atomic is its AI app builder; Atom is the open-source backend providing identity, permissions and application data.

Usage · recent sample building sessions, credits and duration

Names and image context

Write “Atomic” for the product, “Abstract Machines” for the company and “Atom” for the backend. Product views use local sample applications and data. Billing values are illustrative; use the confirmed plan prices above for editorial copy.

PEOPLE

Meet the people behind Atomic.

Drasko Draskovic · Founder & CEO

Drasko Draskovic

Founder & CEO · Paris, France

Drasko Draskovic is the founder of Abstract Machines and the founder and CEO behind Atomic. A deep-tech entrepreneur and systems engineer, he brings more than 20 years of experience in IoT and cloud-computing systems. His background includes work at Texas Instruments, Alcatel-Lucent, Nokia, Sequans and Devialet. He co-founded Datapace with George Saleh as an internal venture at Nokia, where he served as CTO. His work spans open-source infrastructure and the identity, data and execution systems that support applications.

Short bio

Drasko Draskovic is the founder of Abstract Machines and the founder and CEO behind Atomic. He is a systems engineer and entrepreneur with more than 20 years of experience in IoT and cloud computing.

Interview topics

- Taking an app from a plain-language idea through Canvas editing to a reviewed release.
- Why application identity, permissions and data matter in AI app building.
- Source visibility and open-source infrastructure.

Drasko Draskovic · Founder & CEO
drasko@absmach.eu · General enquiries: info@absmach.eu
atomicapp.dev

PEOPLE

Meet the people behind Atomic.

Dusan Borovcanin

Technical leadership

Dusan Borovcanin is Tech Lead at Abstract Machines, with more than 10 years of experience in distributed systems. His work includes confidential-computing infrastructure for AI and the engineering foundations behind Atomic. He previously built cocos-ai alongside Drasko Draskovic at Ultraviolet.

George Saleh

Finance & Operations

George Saleh leads finance and operations for Atomic. He brings more than 27 years of technology-leadership experience spanning AI, blockchain, enterprise architecture and digital transformation. He co-founded Datapace with Drasko Draskovic as an internal venture at Nokia. His background includes Distinguished Member of Technical Staff standing at Nokia.

Portraits included

Drasko Draskovic	4096 × 3072 JPEG · original supplied photograph
Dusan Borovcanin	288 × 288 PNG · supplied profile portrait
George Saleh	460 × 460 JPEG · supplied profile portrait

Portraits are supplied at their original resolution. Dusan's and George's files are suitable for small digital placements; ask the press contact for larger publication requirements. Suggested credit: Courtesy of Abstract Machines. Photographer names were not supplied.

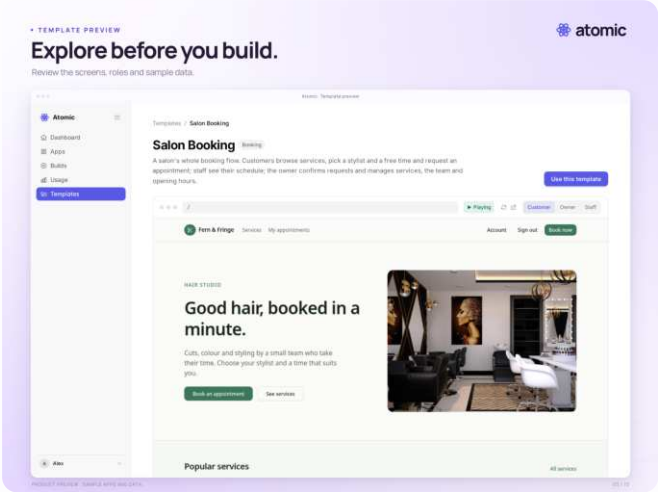

Pair portraits with the product story

Use the builder as the lead product visual, then Canvas editing, version history, publishing and request monitoring to show the full workflow. The current 35-second launch film and matching covers are available in the press room. Portraits remain the supplied originals.

PRESS FAQ

Questions worth answering.

A template can be explored before it is adapted

What is Atomic?

Atomic helps founders, freelancers and small businesses turn an idea into a web application. Start with a prompt or template, refine the result in conversation and on the Canvas, inspect the source, and publish a reviewed version. Atom, the open-source backend from the same team, provides application identities, permissions and data.

Do I need to know how to code?

Start by describing the app you want. Review the preview and refine it through conversation or visual editing. You should still test the workflows before sharing it.

What can I build?

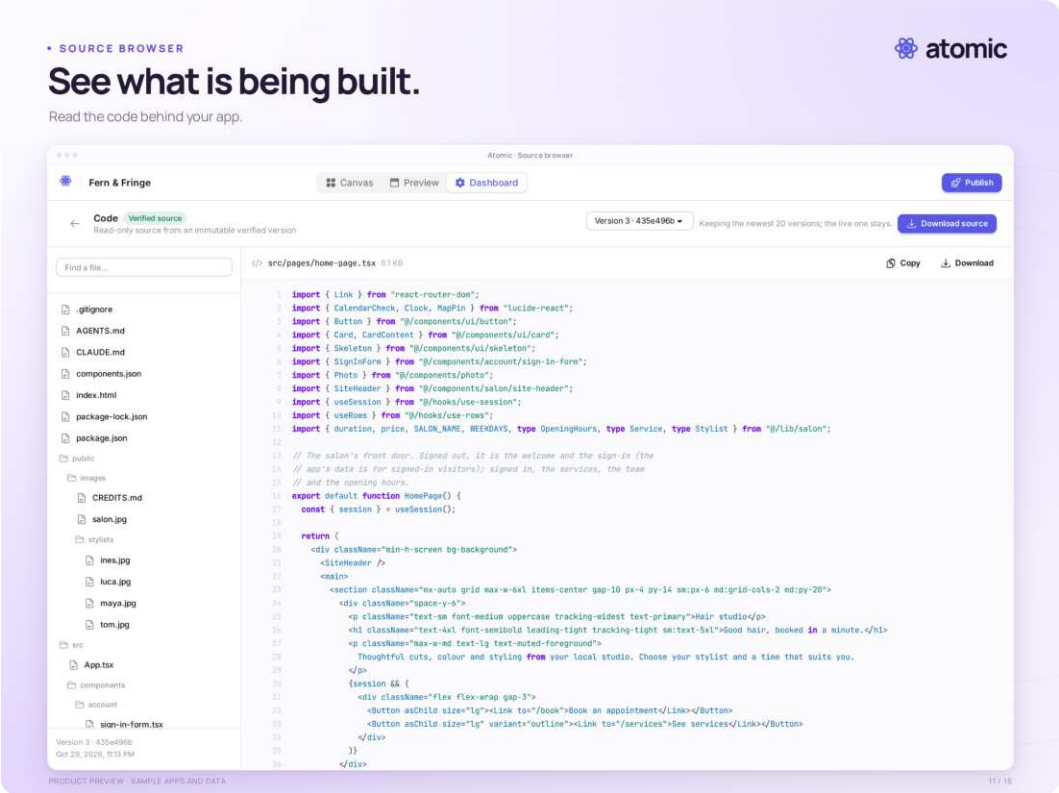

Booking apps, online shops, client portals and internal tools are typical starting points. The commerce starter records order requests; it does not by itself collect payments.

What does the Canvas do?

Navigate screens and states, select elements, tune whole-app styling and leave contextual comments. Builder and Pro support shared workspaces; workspace builders and finished-app users have separate accounts and access flows.

PRESS FAQ

Questions worth answering.

Source browser · a sample app's component, file tree and version selector

Can I inspect and download the code?

All plans support source browsing. Source downloads are available on Builder and Pro. An archive contains code, not app users, business data or hosting infrastructure; it is not a complete portable deployment package.

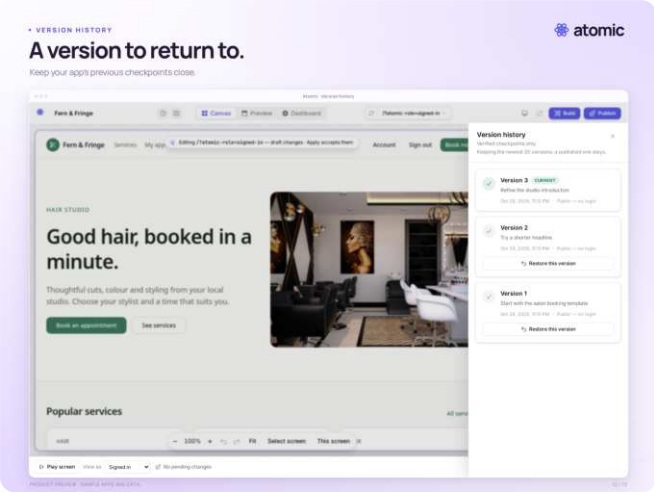

What does "Verified" mean?

It identifies a version that passed the configured automated checks, including build and browser smoke checks. It is not a guarantee that every business workflow is correct or an independent security audit.

atomicapp.dev · Press room and complete media kit

PRESS FAQ

Questions worth answering.

Version history · locally prepared demonstration checkpoints

Can I restore an earlier version?

Source history and publication history concern code. Restoring source or rolling back a release does not restore business data; publication rollback also depends on compatibility with applied data migrations.

Is Atomic open source?

Atom, the backend for identities, permissions and application data, is open source. This does not mean the Atomic builder itself is open source.

What plans does Atomic offer?

Free ($0), Builder at $25/month, and Pro at $50/month. Free includes 250 credits once, used at up to 50 a day. Source downloads, searchable preview logs and collaboration require Builder or Pro. Product information: atomicapp.dev.

Where are the current screenshots and films?

Press room and complete media kit provides 17 captioned product views, three 35-second launch-film formats and matching opening covers. Contact drasko@absmach.eu for interviews.

BRAND GUIDE

Present Atomic clearly.

Use the full logo where space allows. Use the standalone symbol for compact placements such as avatars and icon grids.

Colour and type

Logo violet
#5959E6

Launch-film violet
#6544ED

Ink
#221C30

Launch-film paper
#FBFAF8

Manrope is the campaign typeface. The supplied wordmark is outlined vector artwork, so recipients do not need to install the font. The canonical logo violet is preserved. The current launch film uses #6544ED violet, #221C30 ink and #FBFAF8 paper; use the supplied colours and artwork for consistent product coverage. The font licence is included in the assets folder.

Space and legibility

Leave clear space of at least half the symbol's height around the full logo. As a practical starting point, use the full lockup at 120 pixels wide or larger, and the symbol at 24 pixels or larger. Check legibility at the final display size.

Usage

Keep proportions and colours intact. Use the white version on a dark background and the colour or black version on a light one. Avoid stretching, outlining, adding effects or placing the mark over busy imagery. Write the product name as "Atomic" in text.

BRAND GUIDE

Present Atomic clearly.

Launch cover · widescreen · “Big idea? Make it real.”

One opening design, three shapes

Use the supplied widescreen, square or vertical “Big idea? Make it real.” cover with its matching launch film. Each includes the Atomic logo and atomicapp.dev. Preserve the artwork’s proportions and clear space; choose the prepared format instead of cropping a different one.

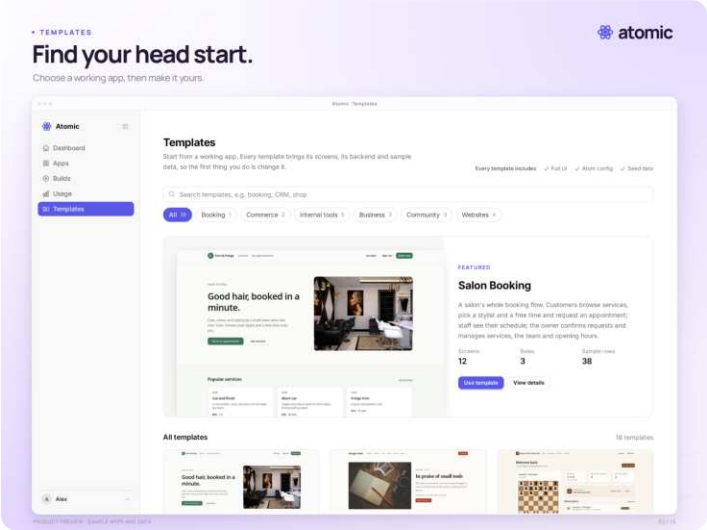

Logo artwork	Outlined SVG for web/design; transparent PNG for slides; vector PDF for print.
Launch covers	1920 × 1080 widescreen · 1080 × 1080 square · 1080 × 1920 vertical.
Editorial credit	Courtesy of Atomic / Abstract Machines. For portraits: Courtesy of Abstract Machines.

Manrope is the campaign typeface; its licence is included under assets. The logo wordmark is outlined. Sample-app photographs remain part of the product views and are not separate stock assets.

VIDEO & SOCIAL ASSETS

Choose the right asset.

Click to watch the widescreen launch film

The 35-second launch film

All three launch formats have the same approved ElevenLabs narration, music and timing. The website appears in the opening, Canvas and closing scenes. The film carries no launch date.

YouTube / website · 16:9	atomic-product-demo.mp4 1920 × 1080 · optional SRT/VTT captions
LinkedIn / X · 1:1	atomic-launch-square.mp4 1080 × 1080 · built-in English captions
Instagram Reels · 9:16	atomic-launch-vertical.mp4 1080 × 1920 · built-in English captions

MP4 · H.264 video / AAC audio · 30 fps. The square file serves both LinkedIn and X. The vertical framing follows the actual recorded Canvas controls and collaboration comment.

VIDEO & SOCIAL ASSETS

Choose the right asset.

Launch cover · square · “Big idea? Make it real.”

Launch cover · vertical · “Big idea? Make it real.”

Choose the matching cover

Use atomic-launch-widescreen-cover.png, atomic-launch-square-cover.png or atomic-launch-vertical-cover.png from 06-social. These clean opening designs include the logo and website address. Choose the cover explicitly when the publishing platform offers that option.

Captions and uploading

Upload the matching MP4. Square and vertical films already contain captions; avoid adding a duplicate caption layer. The product-demo SRT and VTT files share the same speech timing across all three formats. A plain-text transcript is included.

Use the current edition

The current kit supplies the three date-free launch formats and their opening-design covers. Refer to the public press room for the latest product imagery, downloadable documents and media files.

Editorial context

The footage records local sample-app interactions, with framing and a brief effect around the selected element. The standalone screenshots may show different demo states. Sample businesses and data are illustrations, not customer endorsements.
